RETAIL MODE

Maximum add 6 pushbuttons

MPFHD-002GS Interactive media player redefines the concept of a player.

It brings in the new flash technology where users may slot in SD card in the player to display 1080p high definition contents directly to TV and computer monitors.

The highlight of the product is in its interactive interface, customer can connect up to 6 lighted buttons to the unit.

There are 3 modes customers can select from; retail, museum or audio display modes, namely;

- retail mode allows blinking buttons and play selected video then goes back to looping video;
- museum mode enforces a quiet environment and button would light up when selected;
- audio display mode allows the play, next, previous, stop, volume up and down button designed to demo audio displays.
